## CONTENTS

## No. 1 (AUGUST 1963)

|                                                                                                                                                                                                                      | PAGE |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| 1. Post-treatment effects of sublethal doses of dieldrin on the mosquito <i>Aedes aegypti</i> L. By J. DUNCAN . . . . .                                                                                              | I    |
| 2. Toxicological studies on a beetle, <i>Alphitobius laevigatus</i> (F.). II. The influence on toxicity of the site of topical application. By P. S. HEWLETT and K. G. GOSTICK. (With Plate) . . . . .               | 7    |
| 3. Field tests of experimental and commercial soil sterilants against the potato-root eelworm, <i>Heterodera rostochiensis</i> Woll. By J. E. PEACHEY, G. N. RAO and MARGARET R. CHAPMAN . . . . .                   | 19   |
| 4. Azobenzene derivatives as seed treatments. By H. M. FOX, M. J. GEOGHEGAN, J. A. SILK and L. A. SUMMERS . . . . .                                                                                                  | 33   |
| 5. Greenhouse evaluation of chemicals for control of powdery mildews. III. Experiments with surface-active agents. By A. H. M. KIRBY and E. L. FRICK . . . . .                                                       | 45   |
| 6. Fruit-spot ('speckle') of Jamaican bananas caused by <i>Deightoniella torulosa</i> (Syd.) Ellis. V. Attempted control. By D. S. MEREDITH . . . . .                                                                | 55   |
| 7. Stump protection against <i>Fomes annosus</i> . III. Inoculation with <i>Peniophora gigantea</i> . By J. RISHBETH. (With Plate) . . . . .                                                                         | 63   |
| 8. Induction of <i>Verticillium</i> wilt disease symptoms in detached shoots of resistant and of susceptible tomato plants. By FRANCES M. BLACKHURST . . . . .                                                       | 79   |
| 9. <i>Verticillium</i> wilt of tomatoes—further experiments on the role of pectic and cellulolytic enzymes. By FRANCES M. BLACKHURST and R. K. S. WOOD . . . . .                                                     | 89   |
| 10. Bacterial canker of stone-fruits. V. A comparison of leaf-surface populations of <i>Pseudomonas mors-prunorum</i> in autumn on two cherry varieties. By J. E. CROSSE . . . . .                                   | 97   |
| 11. A physiological difference between bean leaves ( <i>Phaseolus vulgaris</i> ), resistant and susceptible to halo blight, caused by <i>Pseudomonas phaseolicola</i> . By B. J. DEVERALL and J. C. WALKER . . . . . | 105  |
| 12. The reaction of different cacao types to infection with swollen-shoot virus. By J. F. LONGWORTH and J. M. THRESH. (With Plate) . . . . .                                                                         | 117  |
| 13. The effect of sowing date and spacing on rosette disease of groundnut in Northern Nigeria, with observations on the vector, <i>Aphis craccivora</i> . By R. H. BOOKER . . . . .                                  | 125  |
| 14. Some factors affecting the transmission of sugar-beet mosaic and pea mosaic viruses by <i>Aphis fabae</i> and <i>Myzus persicae</i> . By A. J. COCKBAIN, A. J. GIBBS and G. D. HEATHCOTE . . . . .               | 133  |

|                                                                                                                                                                             | PAGE |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| 15. A method for the detection of dahlia mosaic virus in <i>Dahlia</i> . By SHEILA M. ROBB. (With Plate) . . . . .                                                          | 145  |
| 16. The effects of nitrogen, phosphorus, potassium and gibberellic acid on leaf area and cell division in Majestic potato. By E. C. HUMPHRIES and S. A. W. FRENCH . . . . . | 149  |
| 17. The uptake of hexoestrol by the roots of plants and its retention when applied to the foliage as a spray. By R. F. GLASCOCK and E. J. HEWITT . . . . .                  | 163  |
| Reviews . . . . .                                                                                                                                                           | 175  |

## No. 2 (OCTOBER 1963)

|                                                                                                                                                                                                                          |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 1. Weed populations on arable land after four-course rotations and after short leys. By A. J. HEARD . . . . .                                                                                                            | 177 |
| 2. An attempt to increase total yield per acre by growing kale and swedes together. By JOHN L. HAMMERTON . . . . .                                                                                                       | 185 |
| 3. The accuracy of the rating method for determining leaf area. By E. C. HUMPHRIES and S. A. W. FRENCH . . . . .                                                                                                         | 193 |
| 4. Factors affecting the growth of carnation plants from shoot apices. By OLWEN M. STONE . . . . .                                                                                                                       | 199 |
| 5. Stem-pitting in <i>Coffea arabica</i> . By F. M. L. SHEFFIELD. (With Plate) . . . . .                                                                                                                                 | 211 |
| 6. Field trials on the effect of a Nigerian swollen-shoot virus on the growth of different cacao types. By J. F. LONGWORTH and J. M. THRESH . . . . .                                                                    | 217 |
| 7. The epidemiology of tomato mosaic. III. Cleaning virus from hands and tools. By L. BROADBENT . . . . .                                                                                                                | 225 |
| 8. The epidemiology of tomato mosaic. IV. Persistence of virus on clothing and glasshouse structures. By L. BROADBENT and J. T. FLETCHER . . . . .                                                                       | 233 |
| 9. The use of nematicides to control the spread of arabis mosaic virus by <i>Xiphinema diversicaudatum</i> (Micol.). By B. D. HARRISON, J. E. PEACHEY and R. D. WINSLOW. (With Plate) . . . . .                          | 243 |
| 10. The reaction of monogenic resistant and susceptible varieties of tomato to inoculation with <i>Fusarium oxysporum</i> f. <i>lycopersici</i> into stems or through Bonny Best rootstocks. By W. G. KEYWORTH . . . . . | 257 |
| 11. The use of baits treated with $\alpha$ -chloralose to catch wood-pigeons. By R. K. MURTON, A. J. ISAACSON and N. J. WESTWOOD . . . . .                                                                               | 271 |
| 12. The effect of three organo-phosphorus insecticides on certain arthropods which infest livestock. By W. N. BEESLEY . . . . .                                                                                          | 295 |
| 13. Toxicological studies on a beetle, <i>Alphitobius laevigatus</i> (F.). III. The joint action of doses of each of four toxicants put on two parts of the body. By P. S. HEWLETT. . . . .                              | 305 |

|                                                                                                                                                                                                     | PAGE |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| 14. Toxicological studies on a beetle, <i>Alphitobius laevigatus</i> (F.). IV. Joint action experiments with two alkyl dinitrophenols. By P. S. HEWLETT . . . . .                                   | 313  |
| 15. A preliminary study of the effect of physical activity on the resistance of rainbow trout ( <i>Salmo gairdnerii</i> Richardson) to two poisons. By D. W. M. HERBERT and D. S. SHURBEN . . . . . | 321  |
| 16. Studies on the fungitoxicity of captan. III. Relation between the sulphhydryl content of fungal spores and their uptake of captan. By D. V. RICHMOND and E. SOMERS . . . . .                    | 327  |
| 17. The influence of temperature on the emergence of the cabbage root fly ( <i>Erioischia brassicae</i> (Bouché)) from overwintering pupae. By T. H. COAKER and D. W. WRIGHT . . . . .              | 337  |
| Notes for speakers (revised) . . . . .                                                                                                                                                              | 345  |
| Reviews . . . . .                                                                                                                                                                                   | 347  |

## No. 3 (DECEMBER 1963)

|                                                                                                                                                                                                           |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 1. Toxicological studies on a beetle, <i>Alphitobius laevigatus</i> (F.). V. The joint actions of some pairs of like and unlike toxicants. By P. S. HEWLETT . . . . .                                     | 351 |
| 2. The systemic action of benzene hexachloride seed dressings. By F. R. BRADBURY . . . . .                                                                                                                | 361 |
| 3. The relationship of insects, fungi and nematodes to the deterioration of roots of <i>Trifolium hybridum</i> L. By C. M. LEACH, E. A. DICKASON and A. E. GROSS . . . . .                                | 371 |
| 4. The relationships between cacao viruses and their vectors: the feeding behaviour of three mealybug (Homoptera: Pseudococcidae) species. By P. F. ENTWISTLE and J. F. LONGWORTH. (With Plate) . . . . . | 387 |
| 5. Some effects of pancreatic ribonuclease and kinetin on tomato aucuba mosaic virus. By M. J. DAFT. (With Plate) . . . . .                                                                               | 393 |
| 6. Some factors affecting the relative incidence, distribution and importance of beet yellows virus and sugar-beet mild yellowing virus in eastern England, 1955-62. By G. E. RUSSELL . . . . .           | 405 |
| 7. Control of sugar-beet downy mildew ( <i>Peronospora farinosa</i> ) by sprays. By W. J. BYFORD and R. HULL . . . . .                                                                                    | 415 |
| 8. The hatch of beet eelworm ( <i>Heterodera schachtii</i> Schm.) larvae in rivanol, and its use for the estimation of field populations. By F. MORIARTY . . . . .                                        | 423 |
| 9. Ecological characteristics of nematode-trapping Hyphomycetes. I. Preliminary studies. By RODERIC C. COOKE . . . . .                                                                                    | 431 |

|                                                                                                                                                                                                                                                                                                      | PAGE |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| 10. Wilt of lucerne caused by species of <i>Verticillium</i> . IV. Pathogenicity of <i>V. albo-atrum</i> and <i>V. dahliae</i> to lucerne and other crops; spread and survival of <i>V. albo-atrum</i> in soil and in weeds; effect upon lucerne production. By J. B. HEALE and IVOR ISAAC . . . . . | 439  |
| 11. <i>Pyricularia grisea</i> (Cooke) Sacc. causing pitting disease of bananas in Central America. I. Preliminary studies on pathogenicity. By D. S. MEREDITH. (With Plate) . . . . .                                                                                                                | 453  |
| 12. Studies on the chemical control of <i>Phytophthora palmivora</i> (Butl.) Butl. on <i>Theobroma cacao</i> L. in Nigeria. IV. Further laboratory and field trials of fungicides. By E. C. HISLOP. . . . .                                                                                          | 465  |
| 13. Studies on the chemical control of <i>Phytophthora palmivora</i> (Butl.) Butl. on <i>Theobroma cacao</i> L. in Nigeria. V. Comparisons of three spraying machines for applying fungicides. By E. C. HISLOP. (With 2 Plates) . . . . .                                                            | 481  |
| 14. Effects of mineral nutrition on the production of tulip bulbs. By W. F. CHEAL and E. J. HEWITT . . . . .                                                                                                                                                                                         | 493  |
| 15. Dressed cereal seed as a hazard to wood-pigeons. By R. K. MURTON and MONICA VIZOSO . . . . .                                                                                                                                                                                                     | 503  |
